

How does it work?

1. Take scans of your smile from anywhere!

Your personalized DM app connects you with your doctor no matter where you are. Connect your phone to the DM ScanBox and you are ready to scan your smiles in two minutes. Much simpler than bringing a full orthodontic practice to the beach, isn't it?

2. Your doctor receives feedback from your scans

After completing your scan, your doctor will review your treatment progress and advise you in the DM in-app messaging system — all without needing an in-office appointment, if applicable.

3. Check how your smile is changing

DentalMonitoring's Before/After Video feature in the app will show you how your teeth are moving over the course of your treatment.
